About Starbucks India:
Starbucks is renowned for sourcing and roasting the finest whole-bean coffees, creating a global haven for coffee enthusiasts. Beyond exceptional coffee, Starbucks promises a delightful experience with pleasant service in a welcoming atmosphere.

Mission: Inspire and nurture the human spirit, one person, one cup, and one neighborhood at a time.
Vision: Establish Starbucks as the world’s leading purveyor of the finest coffee while staying true to their unshakable beliefs.

••••••

Key Statistics:
Starbucks operates in 75 countries, boasting 27,000 outlets and generating over $22 billion in annual revenue.

The Starbucks app has seen significant growth, with 125.15K total web visitors in the last six months 500,000+ downloads on Google Play, and 100,000+ downloads on the App Store.

Right off the bat, just to be clear…

I am not linked with Starbucks in any way, and the opinions expressed in this case study are entirely my own. This case study is not exhaustive because I do not have complete access to all of the user data that informed their present design. This case study was created to improve my learning experience and to challenge me to rework it for a specific purpose.

LET'S GET STARTED!

Why the Redesign?

In February, I initiated this UX Case Study. During a critical client meeting, I found myself in a Starbucks store for the first time. Opting for the virtual ordering system through the Starbucks India app, I encountered a surprising user experience.

Unlike my usual approach to scrolling through menus, the Starbucks app left me confused and astonished. Let's explore the reasons behind the redesign by delving into an analysis of the Starbucks India app.

••••••

App Analysis: Unveiling the Redesign Journey

My experience ordering through the Starbucks app within a store led me to a detailed analysis. After placing my order at the counter, I revisited the entire process, meticulously recording aspects that urged a redesign. Let's navigate through the steps that shaped this transformative journey.

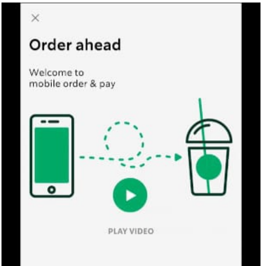
‣ **When launching the Starbucks app for the first time…**

• Facing initial perplexity, I struggled to locate the menu within the Starbucks app, surrounded by enticing offerings. The drink options were obscured behind cards, and even accessing the beverages menu proved challenging.

• Upon selecting the details option, I encountered text information, but the journey didn’t get easier. Some store and dine-in details redirected me to a Google PDF, adding to the complexity.

• The breakthrough came with the mobile order and payment card. Clicking the order button, I was presented with a video button, accompanied by signup and sign-in options, offering a glimpse into the user journey’s twists and turns.

‣ To even view the menu, I had to go through all of this…just to view the DAMN menu



Order ahead

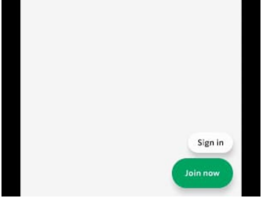
mobile order & pay



Sign in
Join now

• Taking “beat the queue” seriously, I embarked on the signup procedure, expecting a streamlined process. However, it took an unexpected turn, demanding extensive information.

• The signup form included email confirmation, basic details, and even my birth date. While the promise of birthday rewards exists, users may find entering excessive information inconvenient.

• Further, the request for a phone number, address, Pincode, preferred communication means, and terms and conditions added complexity. Notably, any accidental app minimization necessitated repeating the entire signup process, highlighting the need for a more user-friendly approach.

‣ **So after creating an account, I thought that now I can order but….**

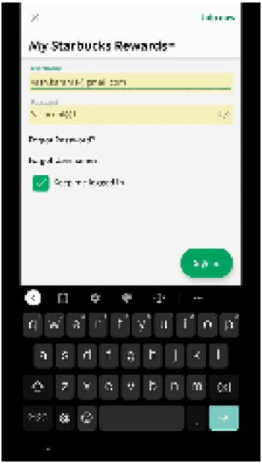
- My genuine annoyance sparked as I successfully created my account, only to be prompted to add a new card before placing my first order. The ability to resume from where I left off was commendable, yet the process took an unwarranted turn.

- Navigating to another tab to add a card, the provided statement was perplexing. It suggested adding a new card on the previous screen, leading to a momentary confusion. The resolution, selecting "NO," prompted a digital card store where I had to choose a card and add funds.

- The question arises: Why not streamline this on a single screen? Selecting the card, entering the amount (with ample white space on the screen), and choosing a payment method — simplifying this process could enhance user experience significantly.

‣ What a foolish flow to go through and the result



My Starbucks Rewards

- After navigating through the labyrinth of hiccups, I eagerly reached the order tab. Excitement turned to dismay as, upon hitting "continue" to explore the menu, I was met with a "coming soon to your location" message.

- Surprisingly, I had already permitted the app to access my location while being inside a Starbucks — a rather amusing contradiction. This frustration led me to abandon the app, opting to place my order at the counter instead.

Found a bug inside the app that annoyed me…

• A crucial observation emerged as I encountered a bug in the app — refusing location permission resulted in the app forcibly closing. What if a user prefers not to share their location and wishes to manually enter it?

• Empowering users with control is fundamental, aligning with the “User Control and Freedom” principle from the 10 Usability Heuristics. Granting users the ability to decide on location preferences, be it manual entry or sharing, enhances the overall usability of the app.

••••••

The Starbucks app has many concerns, including a lack of clear hierarchy, consistency, accessibility, major usability issues, and user control. I will list all to validate them after my User Research.

These were the problems I had to deal with. There must be a variety of problems that average users confront. Then I realized that this could be said of any app, not just Starbucks. So, to gain a better understanding, I'd have to go through the app again and solicit feedback from other users. So, let's jump onto the real work. The Process!

••••••

About the Timeline & Project

The task at hand was to find flaws in a system that was currently functioning successfully. Everyone understands how to make a bad situation better. Making good things work even better, I believe, is the true test!

Timeline: 2 months 12 days
Process: Design Thinking Process
Methods: In-Person UX research, Wireframing, UI design, Usability Testing
Tools: Figma, Illustrator

questions

‣ Process Breakdown

In my quest to uncover challenges, I delved into both qualitative and quantitative research, exclusively focusing on Android users. The research involved interviews with friends and family members, coupled with personal observations using the Starbucks App.

Empathize: Qualitative research via interviews and quantitative insights through surveys formed the foundation, for understanding user perspectives.

Define: Objectives and motivations were crystallized, pinpointing issues and gathering crucial information for the redesign.

Ideate: Utilizing Affinity Maps, Wireframes, and User Flow Mapping facilitated creative brainstorming and solution conceptualization.

Prototype: Crafting UI & UX solutions, I presented prototypes for evaluation and comparison, addressing identified challenges.

Test: Decision validation ensured through Usability Testing, accompanied by a measurement of success to ensure the efficacy of the proposed solutions.

‣ Understanding Starbuck's design system

I had to focus on upgrading the UI because I was re-designing Starbucks rather than starting fresh. To balance both originality and existing components, I had to construct my Design Styleguide while also largely following Starbucks' design approach.

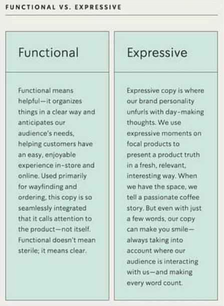
EXPRESSIVE



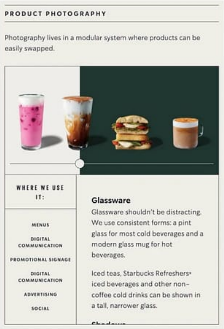
FUNCTIONAL VS. EXPRESSIVE

Functional

Functional means helpful—it organizes things in a clear way and anticipates our audience's needs, helping customers have an easy, enjoyable experience in-store and online. Used primarily for wayfinding and ordering, this copy is so seamlessly integrated that it calls attention to the product—not itself. Functional doesn't mean sterile; it means clear.

Expressive

Expressive copy is where our brand personality unfurls with day-making thoughts. We use expressive moments on focal products to present a product truth in a fresh, relevant, interesting way. When we have the space, we tell a passionate coffee story. But even with just a few words, our copy can make you smile—always taking into account where our audience is interacting with us—and making every word count.



PRODUCT PHOTOGRAPHY

Photography lives in a modular system where products can be easily swapped.

WHERE WE USE IT:

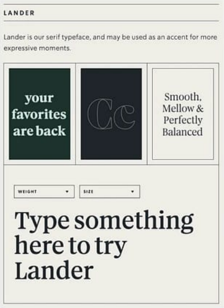
- MENUS
- DIGITAL COMMUNICATION
- PROMOTIONAL SIGNAGE
- DIGITAL COMMUNICATION
- ADVERTISING
- SOCIAL

Glassware

Glassware shouldn't be distracting. We use consistent forms: a pint glass for most cold beverages and a modern glass mug for hot beverages.

Iced teas, Starbucks Refreshers® iced beverages and other non-coffee cold drinks can be shown in a tall, narrower glass.

Shadows



LANDER

Lander is our serif typeface, and may be used as an accent for more expressive moments.

your favorites are back

EDITORIAL PHOTOGRAPHY

WHERE WE USE IT:

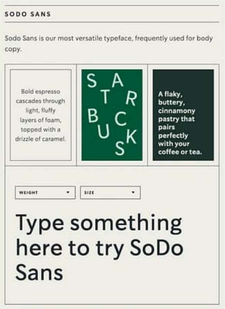
- PARTNER STORIES
- BARISTA CRAFT
- BRAND STORIES
- FARMER STORIES
- SOCIAL IMPACT STORIES
- PUBLIC AFFAIRS USE
- SOCIAL

Studio

Studio photography should feel artful, editorial and intentional. Any props and styling should complement the focal point, not overshadow it. Soft, directional and warm light creates a real, craveable and elevated moment.

Environmental

Whether it's via a friendly face, an aspirational moment or a snippet of a scene that leaves you wanting more, environmental photography should connect with our audience. This is attainable cool—it looks like it could be you.



SODO SANS

Sodo Sans is our most versatile typeface, frequently used for body copy.

Bold espresso cascades through light, fluffy layers of foam, topped with a drizzle of caramel.

S T A R B U C K S

A flaky, buttery, cinnamony pastry that pairs perfectly with your coffee or tea.

WEIGHT ▾ SIZE ▾

TYPE SOMETHING HERE TO TRY PIKE

Adhering to the Starbucks style guide, I infused a contemporary vibe by experimenting with various colors and typefaces, carefully preserving the iconic green as the primary Starbucks hue.

The UI’s style and aesthetics, as well as the makeover pattern, underwent a thorough revision in alignment with the introduction of new functionalities. To enhance the overall experience, custom graphics were introduced, aiming to infuse an element of fun and clarity.

Balancing innovation with familiarity, the challenge was to ensure existing users felt comfortable with the updated experience. This involved maintaining consistent navigation and UX content tone, aligning seamlessly with the Starbucks brand ethos.

Starbucks Design System. Check here

……

Main Objectives:
User Interface Transformation: Prioritize an enjoyable, intuitive, and easily accessible user experience through a revamped interface.

Enhanced App Features: Propose a more streamlined and well-distributed set of app features.

Coffee-Centric Aesthetics: Shift the app's appearance to exude a coffee-centric vibe, departing from a generic or blog-like aesthetic.

Personal Goals:
Leveraging Multiple Roles: Capitalize on my diverse roles in product design, serving as a User Researcher, User Experience Designer, and User Interface Designer.

Tackling Design Challenges: Embrace design challenges, make informed decisions, and address their solutions, fostering continuous learning.

Nurturing Creativity: Unleash my creative instincts, ensuring my passion remains fervent throughout the redesign process.

……

Step 1 — EMPATHIZE

The journey began with an immersive Empathize phase, diving into in-depth User Research to comprehend the Starbucks customer base. I initiated a comprehensive exploration of the app by blending both quantitative and qualitative approaches, utilizing surveys and interviews.

Understanding Users Through Interviews & Surveys:
Choosing Starbucks for redesign opened avenues for reimagining features, but I sought diverse perspectives beyond my own. Surveys and interviews became the gateway to invaluable insights.

Survey Highlights: Conducted to glean insights into user demographics, critical experience stages, and general sentiments toward Starbucks and similar apps. Here are some survey questions and insightful results:

Here are the questions and results I got from the surveys :)

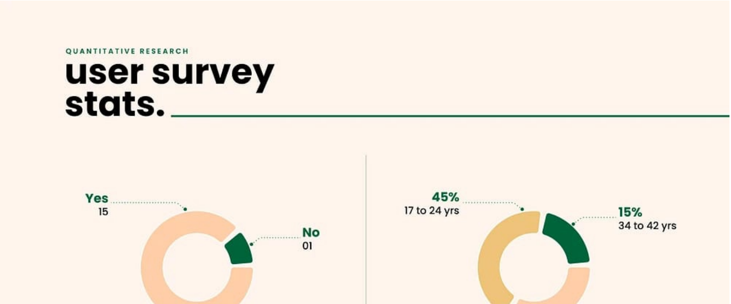
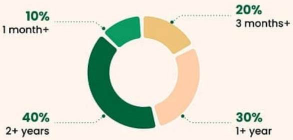
16 users participated in my survey. And got the results I was expecting. Let me show you the demographics and share the insights I collected from the survey.

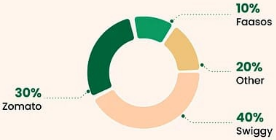


like to order outside food

age brackets



using starbucks app since



apps used to order for better UX

- Almost the majority of the users preferred to order and eat food from outside. Simplicity, Convenience & Availability of Vast Food Choices.

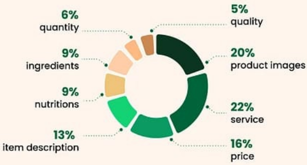
- The majority of consumers have been using the Starbucks app for quite some time. But most of them use for checking orders or wallet balance.

- When asked which app they use for food ordering, they chose, Swiggy and Zomato. Some people even reported placing orders via phone calls. Because of good service, offers, appearance & ease of use.

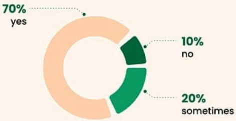
……

QUANTITATIVE RESEARCH

user survey stats.



things customers believe are crucial for improving the ordering experience



does the app's appearance influence their user experience

- Service, product photos, and pricing are frequently cited by customers as being among the most important factors that improved their ordering experience.

- Giving them relevant details before ordering an item improves their experience.

- Surprisingly, the majority of users stated that the app’s look had an impact on their user experience. The app’s flow should be simple, clear, recognizable, and understood.

Some other insights from the survey:

- 90% of them When asked About ordering in advance and pickup, users found it is easy, quick, and time-saving.

- All users usually use Zomato or Gmaps for store navigation and timings and relevant other details.

- Customer support, tracking, and needless canceling are some issues they face. Customer support for Starbucks is difficult to find in terms of experience and usage.

Conducting User Interviews

In the second step of user research, I engaged in in-depth user interviews with 8–9 participants, encompassing a spectrum from daily active users to infrequent users of any drink/food ordering app. The goal was to unravel the context of Starbucks app usage and uncover pain points faced by customers. Conducted via telephone, these interviews provided crucial insights into users' goals, concerns, and attitudes towards the app.

Demographic Representation: With a fair distribution, 5 male interviewees ranged from 17 to 42 years old, while 3 females fell between 24 and 37 years old, aiming for a representative sample mirroring Starbucks' current user base.

Key Interview Insights:

1. Mobile Ordering Preferences: Almost all participants favored using their mobiles for ordering, especially from outside locations.

2. Use of Third-Party Apps: Many frequent Starbucks users resorted to third-party apps for ordering.

3. Desire for Customization: Users expressed a desire for app customization, wanting awareness of new items/offers personalized based on in-app behaviors.

4.Notification Preferences: Participants acknowledged that notifications grab their attention, but excessive notifications could become annoying.

5. Home Feed Browsing: Users preferred a clean and clear home feed, emphasizing the importance of easily browsing Starbucks offerings.

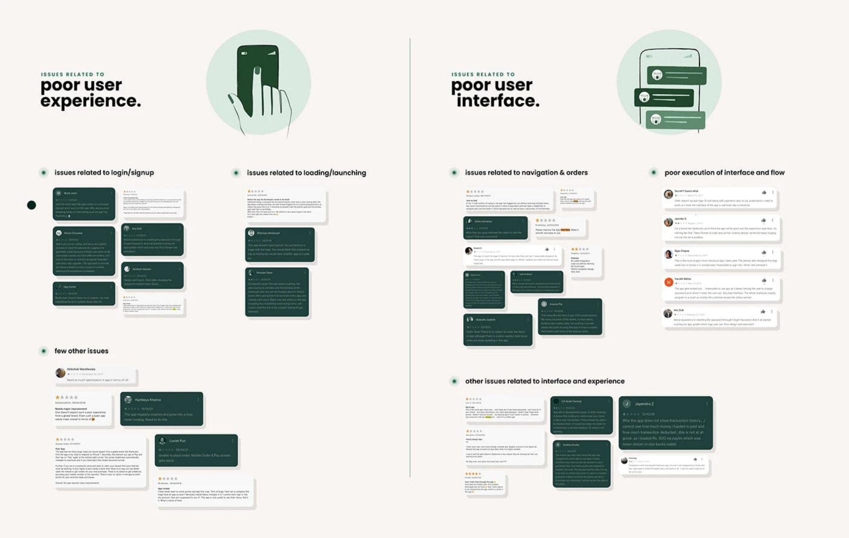
6. Mobile Order and Pay Feedback: While appreciating the feature, users suggested improvements, such as the ability to schedule pickups later in the day.

These insights laid a solid foundation for understanding user behavior and expectations, guiding the subsequent phases of the redesign process.

THE NEXT DIP WAS INTO UNDERSTANDING THE EXISTING USERS

Going Through The App Store Reviews

I started looking for reviews on the Play Store and App Store. The app had over 500,000 downloads (500k+), but there weren’t many reviews or ratings, so I only discovered a few relevant reviews on the app store and other websites. I also read some evaluations of competitor applications (Dunkin Donuts, Costa Coffee, McDonald’s, and KFC) to learn about their finest features for attracting and maintaining customers, as well as the ones they overlooked.



ISSUES RELATED TO
poor user experience.
issues related to login/signup
issues related to loading/launching
few other issues
ISSUES RELATED TO
poor user interface.

other issues related to interface and experience

I started looking for reviews on the Play Store and App Store. The app had over 500,000 downloads (500k+), but there weren’t many reviews or ratings, so I only discovered a few

relevant reviews on the app store and other websites. I also read some evaluations of competitor applications (Dunkin Donuts, Costa Coffee, McDonald's, and KFC) to learn about their finest features for attracting and maintaining customers, as well as the ones they overlooked.

Usability Testing

I asked a few of the same participants (8 of 6) to test the Starbucks IN app (Virtual and in-person Usability Testing). I wanted to see how they would interact with the app's features. (Out of 6 users 5 of them haven't used the app before. I wanted to test and observe the reactions of the app with someone familiar with it, so I asked a few of my participants to download and use the Starbucks app instead of their everyday food app for a full day just to explore.)

Some of the tasks that I gave them during the testing were-
Open the app and go to the details page of the items mentioned on the home screen.
Find the notifications section inside the app and tap on it.
Find the button to register yourself and fill out the form details required for it.
Go into the profile section change the payment method and edit your personal information.
Explore the order section of the app and show me the menu of the app.
Asked the user to close the app and reopen the app. (as many users reported app loading issues)
Go to the store section and show me the information for a nearby store. Order drinks for pick-up. Also asked them to apply filters if they want.
I also asked a few of them to choose one gift card of their interest and load a few bucks into it. (Just to note the steps, the money wasn't loaded)
Take me through the rewards section and follow up with "How to redeem"
…there were many more small tasks that I asked the user to perform so that I could record their reactions, interactions, and expectations.

••••••

Defining the Problem.

Following extensive user research and analysis, the identified pain points within the Starbucks app were crystallized, reflecting common challenges faced by most users.

Pain Points common to most of the users-

- Incomplete Mobile App...
Users preferred ordering from the desktop site due to the app's lack of features.
The mobile app was perceived as less user-friendly compared to the website.

"Although I'm upset, there is a web version, and I never have any issues with that."

- Confusing and Cluttered UI...
Users struggled with discovering information due to a cluttered UI with an endless card list.
Layout, flow, and structure issues, along with inconsistencies, contributed to a poor user experience.

“The moment I clicked, I had the impression that I had to struggle to navigate a menu.”

- Navigation/Payments/Menu Issues...
Difficulty in finding the menu and navigating through a complex flow.
Lack of personalization on the homepage and challenges in locating specific drinks.
Users desired features like transaction history, rewards, quick pick menu, and store information.

“Why does it keep throwing me back to buy a card? Why am I not even allowed to explore the menu???”

- Signup & Login Issues...
Users faced frustration with login and signup processes, desiring quicker methods like fingerprint/face ID or Google/Facebook login.
Annoyance with unnecessary information filling and frequent logouts.

“Who asks for so many details? Am I filling out some government form?”

- Store and Order Navigation...
Users encountered difficulties placing mobile orders at preferred stores.
Issues with finding relevant content, navigation, and well-organized information.

“I know the product is great but can’t find any content, no navigation, or properly laid information! Why would I waste my money on this?”

- Notifications and Settings...
Annoyance with excessive pop-ups and notifications, leading to difficulty in keeping track.
Confusion regarding the placement of settings within the app, lacking intuitive hierarchy.

“Endless pop-ups for offers and notifications are annoying. Why can’t I control them?”

••••••

Let’s get to know some needs of the users.

Needs of the users-

Delving into user needs, participants articulated specific requirements that could significantly enhance their experience with the Starbucks app.

- Personalization:
Users expressed a desire for a more personalized feed, tailored to their in-app behaviors, actions, and interactions.
“Content should be prioritized based on my usage patterns and preferences.”

- More Control and Accessibility:
Participants noticed the absence of an all-in-one search feature, seeking greater control and ease in app exploration.
“I want to explore the app without any hindrance. Give me more control.”

- Transparency, Clarity, and Friendly UI:
Users advocated for a seamless, quicker, and simpler payment process.
Simplification of the Starbucks account registration process with quick options and enhanced security.
Navigational interface changes were requested for a user-friendly and clear experience.
“Make it easier to pay, register, and navigate. I want a friendly and clear interface.”

Additional User Needs Proposed:
Information on Food/Drink Items: Users desired detailed information on food and drink items, including descriptions, images from previous users, and feedback/ratings.

Give/Add Instructions” Feature: Users proposed the addition of a feature allowing them to give or add instructions, enhancing the overall ordering experience.

Order Pickup Scheduling: Many users faced challenges picking up orders on time and suggested features related to scheduling and selecting pickup times.

Crowd Indication and Store Details: Users expressed the need for crowd indication and more detailed store information for a clearer understanding, aiding in the selection of desirable stores to visit.

••••••

Competitive Analysis

I did the Competitive Analysis by listing all the essential features in a structured tabular format to identify the competitors and map out their strengths and weaknesses. I did it in two parts, the first consisting of direct and indirect competitors while the next was within all the Starbucks apps. Since Starbucks runs worldwide, it has country-wide apps too (around 5–7 apps).

DIRECT & INDIRECT APPS

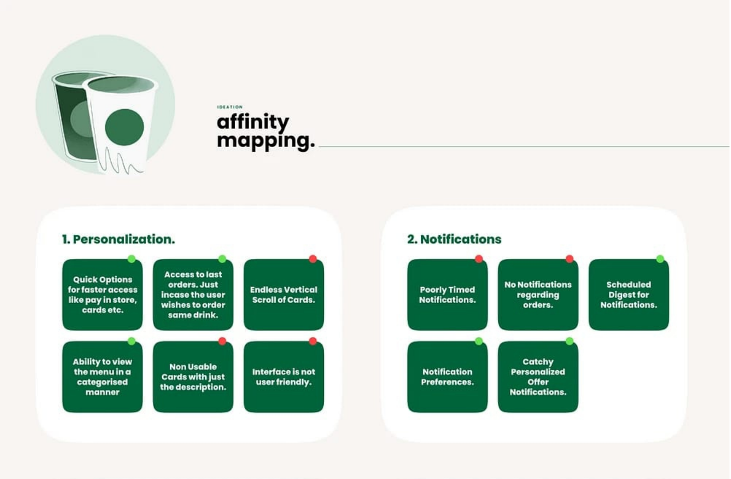
••••••

IDEATION AND PAPER PROTOTYPING

Affinity Mapping

Next, I compiled all the feedback, insights, and pain points listed above and grouped similar ones. This helped me brainstorm and develop potential ideas and gave me a clearer view of what was important to users while keeping in mind the business goals and objectives.



IDEATION

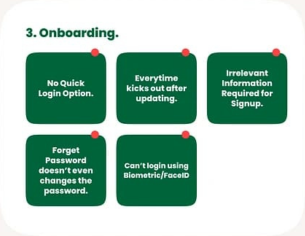
affinity mapping.

1. Personalization.

- Quick Options for faster access like pay in store, cards etc.
- Access to last orders. Just incase the user wishes to order same drink.
- Endless Vertical Scroll of Cards.
- Ability to view the menu in a categorised manner
- Non Usable Cards with just the description.
- Interface is not user friendly.

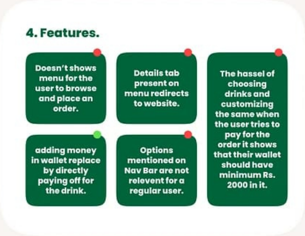
2. Notifications

- Poorly Timed Notifications.
- No Notifications regarding orders.
- Scheduled Digest for Notifications.
- Notification Preferences.
- Catchy Personalized Offer Notifications.



3. Onboarding.

- No Quick Login Option.
- Everytime kicks out after updating.
- Irrelevant Information Required for Signup.
- Forget Password doesn't even changes the password.
- Can't login using Biometric/FaceID



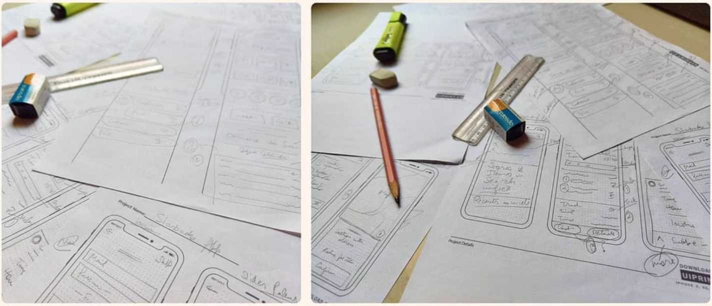
4. Features.

- Doesn't shows menu for the user to browse and place an order.
- Details tab present on menu redirects to website.
- The hassel of choosing drinks and customizing the same when the user tries to pay for the order it shows that their wallet should have minimum Rs. 2000 in it.
- adding money in wallet replace by directly paying off for the drink.
- Options mentioned on Nav Bar are not relevent for a regular user.

Paper Sketching & Wireframing

For paper wireframes, I carefully went through the UI of the Starbucks website, mobile app, its competitors, and other indirect apps. After making some observations, I sketched out all the possible layouts and finally came out with the one that worked the best. This allowed me to prototype solutions for the main screens before committing to high-fidelity designs.

Now that I had a better understanding of who I was designing for and felt equipped with my background research, I moved on to the good stuff! THE USER INTERFACE DESIGN.



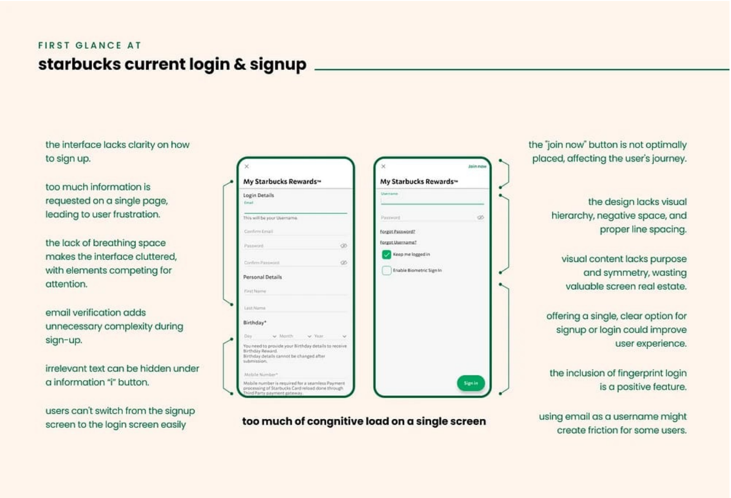
••••••

BEFORE WE JUMP INTO VISUAL DESIGNS

Addressing First Glance at —

But First, The following images will showcase the final visual design and the design decisions taken in accordance with the aforementioned reasons to achieve increased discoverability, and accessibility and bring user experience on butter smooth track.

Login/Signup & Onboarding Experience



FIRST GLANCE AT

starbucks current login & signup

the interface lacks clarity on how to sign up.

too much information is requested on a single page, leading to user frustration.

the lack of breathing space makes the interface cluttered, with elements competing for attention.

email verification adds unnecessary complexity during sign-up.

irrelevant text can be hidden under a information "i" button.

users can't switch from the signup screen to the login screen easily

too much of congnitive load on a single screen

the "join now" button is not optimally placed, affecting the user's journey.

the design lacks visual hierarchy, negative space, and proper line spacing.

visual content lacks purpose and symmetry, wasting valuable screen real estate.

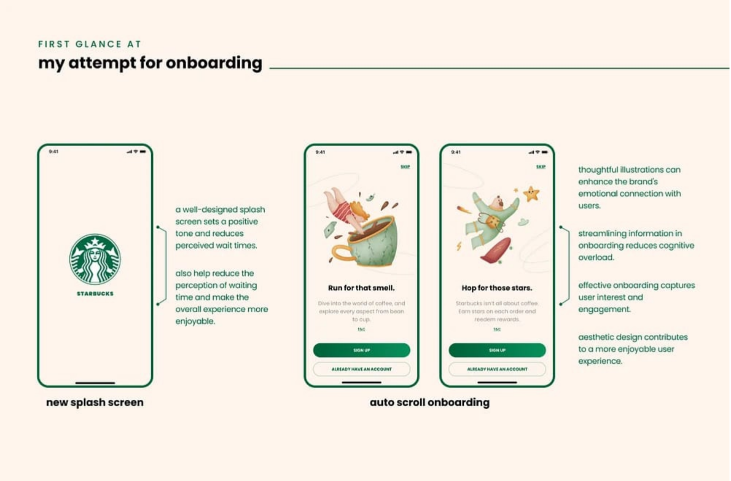
offering a single, clear option for signup or login could improve user experience.

the inclusion of fingerprint login is a positive feature.

using email as a username might create friction for some users.

••••••

I redesigned screens and proposed three new screens before login/signup.



FIRST GLANCE AT

my attempt for onboarding

9:41
STARBUCKS

a well-designed splash screen sets a positive tone and reduces perceived wait times.

also help reduce the perception of waiting time and make the overall experience more enjoyable.

new splash screen

9:41
SKIP

Run for that smell.

Dive into the world of coffee, and explore every aspect from bean to cup.

T&C

login & signup screens

employed intuitive icons for easy navigation.

offer a "skip" option for quicker access.

provided concise instructions in plain language.

welcome users warmly upon registration.

gradually collect user information for a smoother experience.

••••••

OTHER SCREENS

flow for location after onboarding

so after onboarding we ask for location permission

location permission requests aim for a secure & user-centric experience.

while offering a "skip" option respects user choice & minimizes frustration, optimizing its visibility can enhance its effectiveness.

providing both way to get user location demonstrates value, user control & can be a more user-friendly approach.

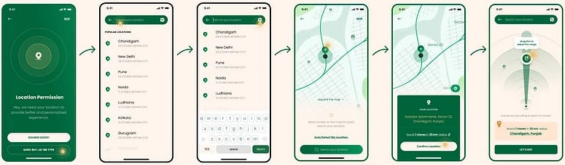
current starbucks experience doesn't leverage user location data.

users choose from popular locations and see available stores in cities.

Users can conveniently set location on the map through marker dragging.

users confirm location for precision and control.

improves search precision by allowing users to set a map radius for finding stores in specific locations.



SKIP
Location Permission

Ludhiana
Kolkata
Gurugram
Sector 22
Auto Detect My Location
Confirm Location
LET'S GO!

leverage location data for personalized user experiences, including offers and nearby stores.

enter location manually or automatically for a seamless experience.

for a user-friendly experience, the app conveniently presents store info & relevant data on the home screen.

••••••

AS A GUEST USER

starbucks homescreen

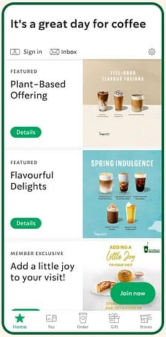
large images and titles cause ui clutter and visual imbalance.

the ui appears outdated, lacks structure, and risks high drop-off rates.

users expect menu and categories on the home screen for exploration.

endless vertical scrolling with numerous offers can confuse users.

a lack of visual hierarchy makes the interface challenging to understand.



It's a great day for coffee

high cognitive load due to crowded elements hinders user experience.

starbucks' design overwhelms users with odd button placement and scattered information.

redundancy between "my benefits" and "reward" screens needs improvement.

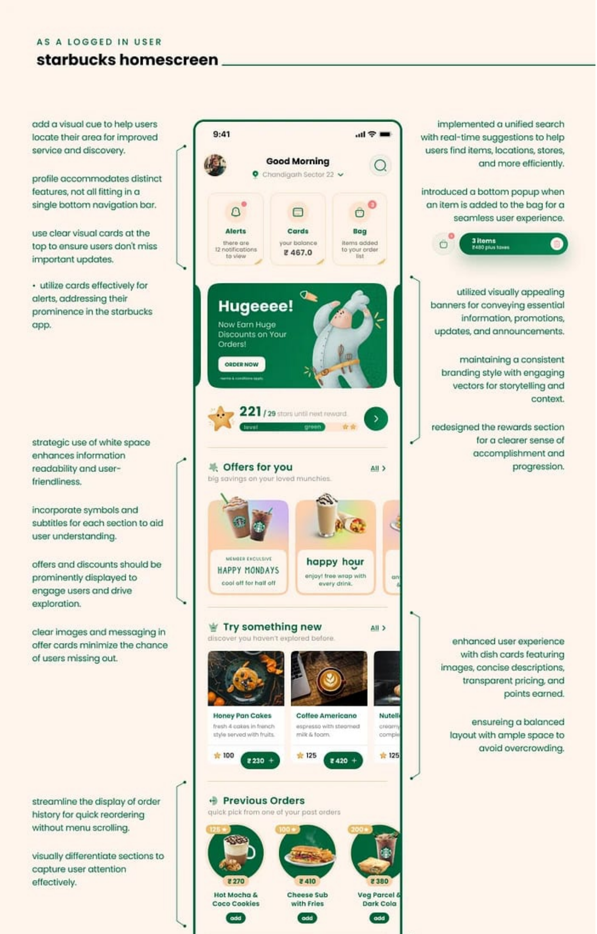
small buttons on the home screen struggle to grab user attention.

post-login navigation lacks intuitiveness, especially for accessing the profile.

mis-clicks on the rewards tab from top navigation frustrate users.

redundant "pay" and "pay in store" buttons in the navigation bar can be streamlined to declutter the interface.

My redesign of the Starbucks home screen



AS A LOGGED IN USER

starbucks homescreen

add a visual cue to help users locate their area for improved service and discovery.

profile accommodates distinct features, not all fitting in a single bottom navigation bar.

use clear visual cards at the top to ensure users don't miss important updates.

- utilize cards effectively for alerts, addressing their prominence in the starbucks app.

strategic use of white space enhances information readability and user-friendliness.

incorporate symbols and subtitles for each section to aid user understanding.

offers and discounts should be prominently displayed to engage users and drive exploration.

clear images and messaging in offer cards minimize the chance of users missing out.

streamline the display of order history for quick reordering without menu scrolling.

visually differentiate sections to capture user attention effectively.

implemented a unified search with real-time suggestions to help users find items, locations, stores, and more efficiently.

introduced a bottom popup when an item is added to the bag for a seamless user experience.

utilized visually appealing banners for conveying essential information, promotions, updates, and announcements.

maintaining a consistent branding style with engaging vectors for storytelling and context.

redesigned the rewards section for a clearer sense of accomplishment and progression.

enhanced user experience with dish cards featuring images, concise descriptions, transparent pricing, and points earned.

ensureing a balanced layout with ample space to avoid overcrowding.

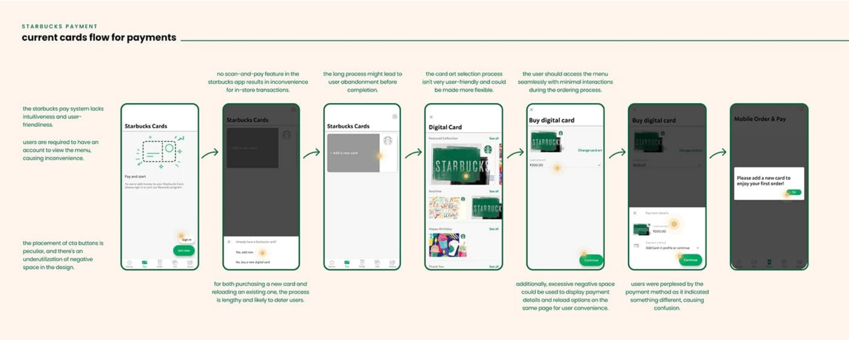
added a manual refresh feature for accurate reward updates.

included a clear prompt to encourage collecting more stars.

for "how it works" provided visuals for a quicker understanding of the rewards system.

••••••

This is the flow for adding a payment to continue to the next step which is viewing/ordering from the menu.



STARBUCKS PAYMENT

current cards flow for payments

the starbucks pay system lacks intuitiveness and user-friendliness.

users are required to have an account to view the menu, causing inconvenience.

the placement of cta buttons is peculiar, and there's an underutilization of negative space in the design.

no scan-and-pay feature in the starbucks app results in inconvenience for in-store transactions.

for both purchasing a new card and reloading an existing one, the process is lengthy and likely to deter users.

the long process might lead to user abandonment before completion.

the card art selection process isn't very user-friendly and could be made more flexible.

the user should access the menu seamlessly with minimal interactions during the ordering process.

additionally, excessive negative space could be used to display payment details and reload options on the same page for user convenience.

users were perplexed by the payment method as it indicated something different, causing confusion.

ORDER AHEAD

mobile order and pay flow

users can't view the order menu without creating an account after adding a card, creating a significant obstacle.

varying scales, aesthetics, and positioning of illustrations across sections contribute to visual inconsistency.

the "play video" button blending with illustrations creates confusion, lacking clear highlighting for user interaction.

vertical categorization leads to poor user experience due to excessive scrolling.

clicking on menu items leads only to a picture and description, lacking a clear call to action or any link for user guidance.

excessive white space disrupts content hierarchy, increases scrolling, reduces information density.

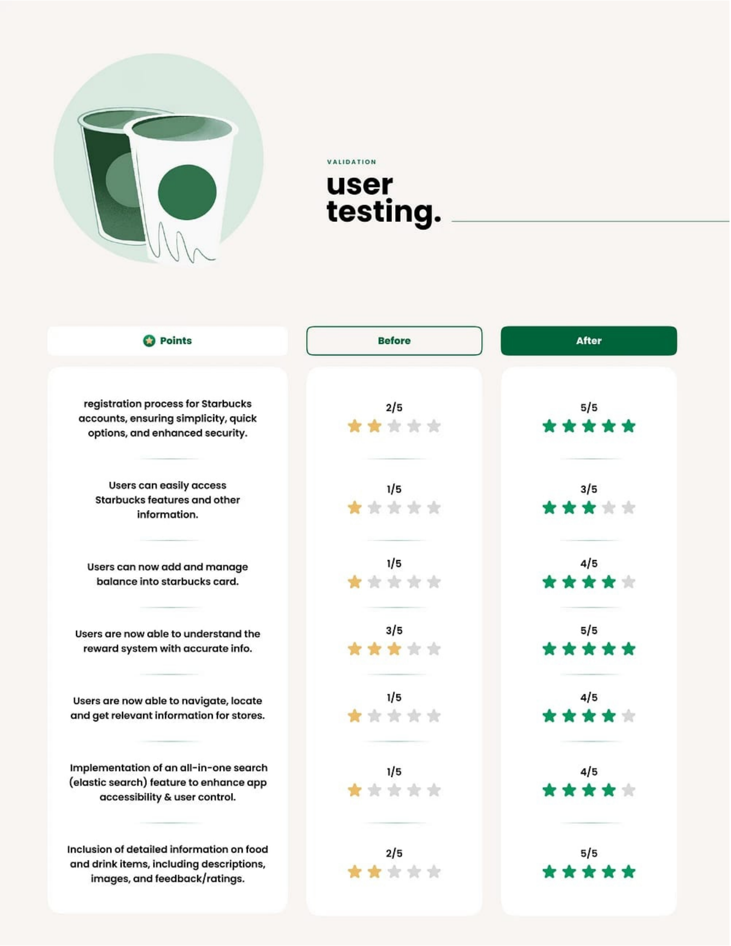
VALIDATION TESTING

I conducted guerilla testing with 5 new users, using the same scenario as in usability testing. The goal was to validate the prototype's effectiveness in addressing the identified problem, with a focus on users sharing a similar background to the initial user.

Here are the results of validation testing:



VALIDATION

user testing.

Points	Before	After
registration process for Starbucks accounts, ensuring simplicity, quick options, and enhanced security.	2/5 ★★☆☆☆	5/5 ★★★★★
Users can easily access Starbucks features and other information.	1/5 ★☆☆☆☆	3/5 ★★★☆☆
Users can now add and manage balance into starbucks card.	1/5 ★☆☆☆☆	4/5 ★★★★☆
Users are now able to understand the reward system with accurate info.	3/5 ★★★☆☆	5/5 ★★★★★
Users are now able to navigate, locate and get relevant information for stores.	1/5 ★☆☆☆☆	4/5 ★★★★☆
Implementation of an all-in-one search (elastic search) feature to enhance app accessibility & user control.	1/5 ★☆☆☆☆	4/5 ★★★★☆
Inclusion of detailed information on food and drink items, including descriptions, images, and feedback/ratings.	2/5 ★★☆☆☆	5/5 ★★★★★

The conclusions of this Validation Testing are:

Improved Personalized Feed Prioritization: Implemented personalized content prioritization based on user behaviors, resulting in a more tailored and enjoyable browsing experience.

Enhanced Search Feature Accessibility: Implemented an all-in-one search (elastic search) feature, improving accessibility and empowering users to easily locate desired content, enhancing overall control and navigation.

Streamlined Payment Process: Simplified the payment process, resulting in a seamless, quicker, and more user-friendly transaction experience, reducing barriers and enhancing overall satisfaction.

Simplified Account Registration: Revamped the account registration process to offer simplicity, quick options, and enhanced security measures, streamlining the sign-up experience and minimizing barriers, resulting in increased user registrations.

Enhanced Navigational Interface: Implemented navigational interface improvements to provide a user-friendly and clear experience, enabling users to easily find desired features and content, leading to improved satisfaction and engagement.

Comprehensive Item Information: Added comprehensive item information, including descriptions, images, and feedback/ratings, empowering users to make informed choices, resulting in increased satisfaction and confidence in their purchases.

Convenient Order Instructions Feature: Introduced an order instructions feature, allowing users to provide specific instructions, enhancing customization options and meeting individual preferences, resulting in improved user satisfaction and loyalty.

Efficient Order Pickup Scheduling: Implemented features for scheduling and selecting pickup times, enabling users to easily manage pickups according to their preferences, reducing frustrations and improving overall user experience and convenience.

Management of Starbucks Card Balance: After the redesign, users are now able to add and manage balance into their Starbucks card within the app, enhancing convenience and control over their accounts.

Improved Understanding of Reward System: After the redesign, users can now understand the reward system with accurate information, leading to increased engagement and utilization of rewards.

••••••

Few Learnings

• User-Centric Design: Prioritize user needs and feedback throughout the design process. An in-depth analysis of the design decisions is really important to make sure that you’re fulfilling user requirements through empathy.

- Embrace continuous refinement based on user testing and feedback.

- Ensure accessibility features are integrated to cater to all users.

- Use both qualitative and quantitative data to inform design choices.

- Small changes in design can make a huge impact on the whole user experience.

••••••

Challenges

- I worked on a lot of iterations to arrive at the right solution. During this process, I realized that iteration is the key to any optimum design solution. There’s no other way around.

- While working on design solutions for a problem, I came across some micro-challenges, which made the whole project even more interesting. I learned how to resolve those challenges without compromising on the primary design solution.

- Does “working on an old MacBook laptop with frequent power cuts” count? :P

••••••

Insights

In the process of making this case study, I learned a lot of things. How to apply design thinking, understand the user needs, find problems, and having to be able to find solutions from the pain point and so many things that I have learned.

Because of that, I read a lot of references or watch videos related to UX Research. And also try other digital products and then see how they use it and how it impacts. It was great to be able to find a solution to user problems.
